Education

University of Warwick Sep 2025 – Present
Bachelor of Science in Computer Science *Warwick*

Wallington County Grammar School Sep 2018 – Jul 2025
A Levels: Computer Science, Maths, Further Maths and Physics — A^*A^*AA *London*

- GCSEs: eight grade 9s and two grade 8s.

Work Experience

Hexa (Y Combinator-backed) Jul 2026 – Aug 2026
Software Engineering Intern *London*

- Built a `React` and `TypeScript` sales prototype for Hexa, an AI automation platform for industrial distributors, covering email and phone orders from request-for-quote intake through quoting, purchase-order review and delivery.
- Created typed models for orders and calls and isolated email and call-processing logic, enabling AI integrations without changes to the core application.
- Deployed a `Vercel` Preview from a feature branch and validated complete order journeys through end-to-end testing and bug fixes.

Marigold Jul 2024
Front-End Web Development Experience *London*

- Supported the development and debugging of iframe-based components that clients could embed into existing websites without modifying their core codebases.
- Participated in daily stand-ups covering prior-day progress and assigned development tasks for the day ahead.

Projects & Experience

Goldman Sachs × AmplifyME Apr 2026
Quantitative Strategies Experience

- Designed a threshold-based arbitrage strategy to identify pricing discrepancies between a Magnificent Seven ETF and its constituent stocks, generating simulated buy or sell decisions when mispricing exceeded a calibrated threshold.
- Recalibrated the threshold as market conditions changed, balancing simulated P&L against net market exposure.

Opportunity Cost Engine Mar 2026
Full-Stack Developer, Warwick Finance Societies Hackathon

- Built a full-stack platform in a four-person team that compared a retail purchase with projected returns from investing the same amount in the retailer's stock using three forecasting models.
- Implemented a lexicon-based sentiment-analysis pipeline using `yfinance` and `TextBlob`, scoring recent company headlines and incorporating the results into stock-growth projections.
- Developed most of the front-end, integrating `Flask` endpoints with the `JavaScript` interface and presenting model outputs through interactive `Chart.js` visualisations.

British Physics Olympiad Apr 2024 – Aug 2024
Computational Challenge, Gold Award

- Built a `Python` application using `NumPy` and `Matplotlib` to simulate projectile motion with and without drag through interactive controls and real-time trajectory visualisation.

CanSat Competition Nov 2023 – Apr 2024
Team Lead, CREST Gold Award

- Led a six-person team to design a CanSat prototype and analysed flight data in `Python` to estimate Earth's radius.

Technical Skills

Languages: `Python`, `TypeScript`, `JavaScript`, `Java`, `SQL`
Frameworks, Libraries & Tools: `React`, `Vite`, `Flask`, `Tailwind CSS`, `NumPy`, `Matplotlib`, `scikit-learn`, `Chart.js`, `Git`, `GitHub`, `Vercel`, `Jira`

Additional Information

Leadership: Second-dan black belt and karate instructor; taught classes of 30+ students and officiated competitions.
Communication: Grade 8 LAMDA Public Speaking Distinction; recipient of the Cameron Cup and Sanderstead Cup.
