Education

University of Warwick Sep 2025 – Present
Bachelor of Science in Computer Science *Warwick*

Wallington County Grammar School Sep 2018 – Jul 2025
*A Levels: Computer Science, Maths, Further Maths and Physics — A*A*AA* *London*

- GCSEs: Eight Grade 9s and Two Grade 8s.

Work Experience

Hexa (Y Combinator-backed) Jul 2026 – Aug 2026
AI Software Engineering Intern *London*

- Shipped a production-style B2B sales workflow prototype using React, TypeScript, Vite and Tailwind CSS, supporting end-to-end email and phone orders from RFQ intake through quoting, PO review and delivery.
- Architected typed domain models, a session-persisted client state machine and a backend-ready services layer for future LLM, email, ERP and carrier integrations without requiring UI rewrites.
- Deployed the application through a GitHub-integrated Vercel Preview workflow and validated complete sales journeys, resolving routing, transcript-navigation and multi-line order-total defects.

Marigold Jul 2024
Front-End Web Developer Work Experience *London*

- Implemented and debugged iframe-based integrations for client websites, resolving issues affecting embedded content, styling and user interaction.
- Participated in daily stand-ups, where progress from the previous day was reported and team members coordinated on assigned development tasks for the day ahead.

Projects & Experience

Goldman Sachs × AmplifyME Quantitative Strategies Experience Apr 2026

- Developed a threshold-based arbitrage strategy that identified pricing discrepancies between a Magnificent Seven ETF and its constituent stocks, triggering trade decisions when mispricing exceeded a calibrated threshold.
- Iteratively tested and refined the strategy using new financial data and performance outputs, balancing simulated P&L against net market exposure.

Opportunity Cost Engine *Full-Stack Developer, Warwick Finance Societies Hackathon* Mar 2026

- Collaborated in a four-person team to build a full-stack platform that compares the cost of any retail purchase with the projected returns of investing the equivalent capital in the retail company's stocks via forecasting models.
- Implemented a lexicon-based sentiment-analysis pipeline using `yfinance` and `TextBlob`, scoring recent company headlines and incorporating the results into stock-growth projections.
- Drove the front-end engineering, integrating `Flask` endpoints with the JavaScript interface and transforming model outputs into interactive `Chart.js` visualisations.

British Physics Olympiad Computational Challenge Apr 2024 – Aug 2024

- Built a Gold-awarded full-stack Python application to simulate projectile motion with and without drag, featuring interactive controls and real-time data visualisation.

CANSAT Competition Nov 2023 – Apr 2024

- Led a six-person team to develop a model rocket and performed Python-based flight-data analysis to estimate the radius of the Earth, earning a CREST Gold Award.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL
Frameworks & Tools: React, Vite, Flask, Tailwind CSS, NumPy, Matplotlib, scikit-learn, Chart.js, Git, GitHub, Vercel, Jira

Additional Information

Leadership: Second-Dan Black Belt Karate Instructor; taught classes of 30+ students and officiated competitions.
Communication: Grade 8 LAMDA Public Speaking Distinction; Cameron Cup and Sanderstead Cup recipient.
